NATHAN TABOR

CYBERSECURITY | SECURITY OPERATIONS | SYSTEMS & NETWORK ADMINISTRATION

Niceville, FL • (850) 333-2186 • tabornfg@protonmail.com

PROFESSIONAL PROFILE

CompTIA Network+ certified cybersecurity student with hands-on experience investigating network traffic and security-relevant logs, administering Windows and Linux systems, and securing segmented virtual networks. Applied analytical and troubleshooting skills in competitive security exercises, simulated enterprise environments, and independently maintained infrastructure. Quickly develops testable hypotheses, researches unfamiliar technologies, and validates solutions through reproducible technical testing and documentation.

CERTIFICATIONS & PROFESSIONAL DEVELOPMENT

Certified CompTIA Network+ (N10-009), earned 05/2026

Currently studying CompTIA Security+ and CySA+ (not yet certified)

TECHNICAL COMPETENCIES

Security operations & analysis Zeek network logs; Wireshark/tshark; PCAP analysis; DNS/HTTP/TCP traffic; incident-style triage; log and artifact correlation; evidence documentation

Windows & endpoints Windows Server 2019; Active Directory Domain Services; DNS/DHCP; Windows ADK, Windows PE, Sysprep, image deployment; system troubleshooting

Linux, networks & virtualization Debian Linux administration; user/group permissions; SSH/SFTP; TCP/IP, routing, VLANs, firewalls; OPNsense; OpenWrt; Tailscale; Vmware, Hyper-V, KVM/libvirt

Web, OT & automation HTTP request/response analysis; web access controls; WordPress; Apache; MariaDB; Python, shell scripting, CLI tools; introductory PLC/SCADA troubleshooting

APPLIED CYBERSECURITY INVESTIGATIONS

National Cyber League (NCL), Fall 2026 Individual Game | Cyber Skyline | 10/2026

- Investigated Zeek connection, DNS, and HTTP logs and network captures with Wireshark/tshark; identified host communication patterns, persistent DNS activity, IP-to-MAC mappings, and protocol anomalies.
- Assessed web applications and APIs by examining HTTP headers, session tokens, authorization behavior, and configuration errors; reproduced findings with curl and command-line testing.
- Examined host and application artifacts, including text logs, SQLite data, encoded content, archives, and compiled Python files; reconstructed technical behavior and recovered challenge evidence.
- Built and adapted Python/shell analysis workflows for extracting fields, correlating records, decoding artifacts, and validating hypotheses; documented repeatable methods and findings.

FORMAL CYBERSECURITY & IT TRAINING

Applied Cybersecurity Program | 08/2026–Present

- Administered Active Directory Domain Services, users/groups, network services, and Windows Server environments within simulated isolated enterprise networks.
- Used Windows Assessment and Deployment Kit (ADK), Windows PE, and Sysprep to prepare and deploy standardized Windows images in a simulated secure enclave.
- Performed foundational configuration and troubleshooting of industrial control systems (ICS/OT), including programmable logic controllers (PLCs) and SCADA training systems.
- Performed Linux user/group and file-permission management, system administration, and command-line diagnostics on lab hosts.

INDEPENDENT TECHNICAL PROJECTS

Segmented Virtual Network & Security Lab | 2026–Present

- Designed and maintained a KVM/libvirt homelab with OPNsense firewall and isolated management, user, server, DMZ, and red-team networks; configured interfaces, addressing, DHCP/DNS, routing, and traffic-control rules.
- Operated a Windows Server Active Directory lab and Debian servers; diagnosed networking and authentication failures through log inspection, configuration reviews, controlled tests, and vendor documentation.

Web Infrastructure, Secure Remote Access & Client Website | 2026–Present

- Configured Debian-based Apache/MariaDB web environments and supported a live WordPress website; troubleshot SFTP access, DNS, permissions, application configuration, and hosting/migration constraints.
- Implemented Tailscale-based remote access through an OpenWrt router with SSH key authentication, firewall zones, MagicDNS, and remote Wake-on-LAN; verified behavior across external networks.
- Isolated network-performance bottlenecks by comparing direct-modem, wired, and Wi-Fi testing; measured over 900 Mbps at the modem and over 500 Mbps through the router after configuration testing.

Local AI & GPU-Accelerated Computing | 2026–Present

- Built a local large-language-model inference environment using llama.cpp, CUDA, and AMD ROCm; worked through driver, build, dependency, and accelerator compatibility issues on a dual-GPU Linux workstation.
- Used AI-assisted research and scripting to accelerate investigations, then independently tested commands, checked results against primary documentation, and corrected unreliable outputs.

PROFESSIONAL EXPERIENCE

Server / Front- & Back-of-House Team Member | PB&J Bistro & Café **04/2026–Present**

Niceville, FL

- Coordinate simultaneous customer requests, point-of-sale transactions, and food-service workflows in a time-sensitive environment; triage issues, communicate clearly, and escalate problems appropriately.
- Maintain reliable service during high-volume periods through attention to detail, fast prioritization, teamwork, and calm problem resolution.

Community Operations & Service | Franciscan Friars **05/2021–03/2026**

Burnsville, NC

- Supported multi-year community operations, public outreach, construction, and publication/distribution activities; adapted to varied assignments requiring initiative, follow-through, and collaboration.
- Performed technical and hands-on work, including specialized timber-framing construction; developed sound judgment, resilience, and clear communication in service-oriented settings.

EDUCATION & ADDITIONAL QUALIFICATIONS

Florida State University — B.A., Chinese Language & Culture | Tallahassee, FL | 05/2021 | Magna Cum Laude

Language Conversational Mandarin Chinese
